

FIBROMYALGIA TESTIMONIAL

I have been seeing Dr. Corcetti for three months and I am a totally changed person. For the past six years I have suffered from severe headaches and neck pain. I am 16 years old.

I had to use Advil everyday without much relief. So I was usually left to manage the pain myself. This would keep me from doing things like hanging out with my friends, school work and my favorite sport and past time swimming.

I went to at least three other Chiropractors, three Massage Therapists, Occupational Therapy and Physical Therapy. All with temporary fixes and no lasting results.

This past year in the winter of 2010 I wasn't able to swim due to a shoulder injury which in itself was a bad thing but in the big picture a really good thing. I was pushed to the point to where I couldn't do this anymore.

My parents heard from a family friend who had recently starting seeing Dr. Corcetti that the results were amazing. So with nowhere left to turn, we decided to give him a try. And this was the best decision I made throughout the entire six years.

As soon as we got there we got down to business and to the root of the problem, tackling them one by one. I've been learning how to eat right, stand right, and overall feel right. I don't suffer from the headaches any more. And we have been keeping busy and sticking to a diet that has helped me out just as much as the physical adjustments.

Dr. Corcetti has done an amazing job with me and continues to work to be a great doctor and also a really good friend who looks out for me, always making sure I'm feeling better and better. ~ S. W.
